

Neuroethics 2026

MULTIPLE LOCATIONS
15-17 APRIL 2026

The annual conference of the International Neuroethics Society (INS) and Società Italiana di Neuroetica (SINe) will feature in-person gatherings in the U.S., Italy, and South Africa, developed in coordination with the Stellenbosch University Department of Psychiatry and other partners.

RESEARCH PRESENTATIONS

Students, researchers, and professionals at all career levels and from any discipline can submit their research related to neuroethics to be considered for presentation.

We welcome research that addresses any topic or issue related to neuroethics and the ethical, legal, clinical, social, and policy considerations raised by brain sciences and technology. Research may align with the theme.

Authors with an accepted research will be invited to present a poster or give a talk. Presentations may be given in-person at one of the locations, or virtually.

THEME

Building Bridges and Cultivating Community

This interdisciplinary scientific conference celebrates the international neuroethics community and the importance of building connections across distances, disciplines, perspectives, and between people all around the globe.

We will feature discussions of the ethical implications of advancements in brain sciences and technologies, how these developments intersect with the lived experiences of people and their communities, and their potential to impact public discourse and social progress.

OPTIONS

- › Attend in-person at the event sites in Africa, Europe, or the U.S.
- › Participate virtually from anywhere

LOCATIONS

- › Stanford, CA, USA
- › Lucca, Tuscany, Italy
- › Stellenbosch, South Africa

DATES

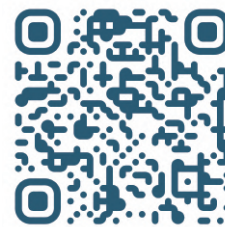

April 15-17, 2026

DEADLINES

Research presentation abstracts are due January 2026.

In-person attendees are encouraged to register by March 15, 2026.

Learn more about the conference, the call for neuroethics research, and registration on our website.

NEUROETHICSSOCIETY.ORG/MEETING

Neuroethics 2026 is a scientific conference organized by the International Neuroethics Society (INS), Società Italiana di Neuroetica (SINe), and the Stellenbosch University Department of Psychiatry, with generous support from organizing partners and sponsors at Stanford, Lucca and Stellenbosch.
